

Design follows Funktion

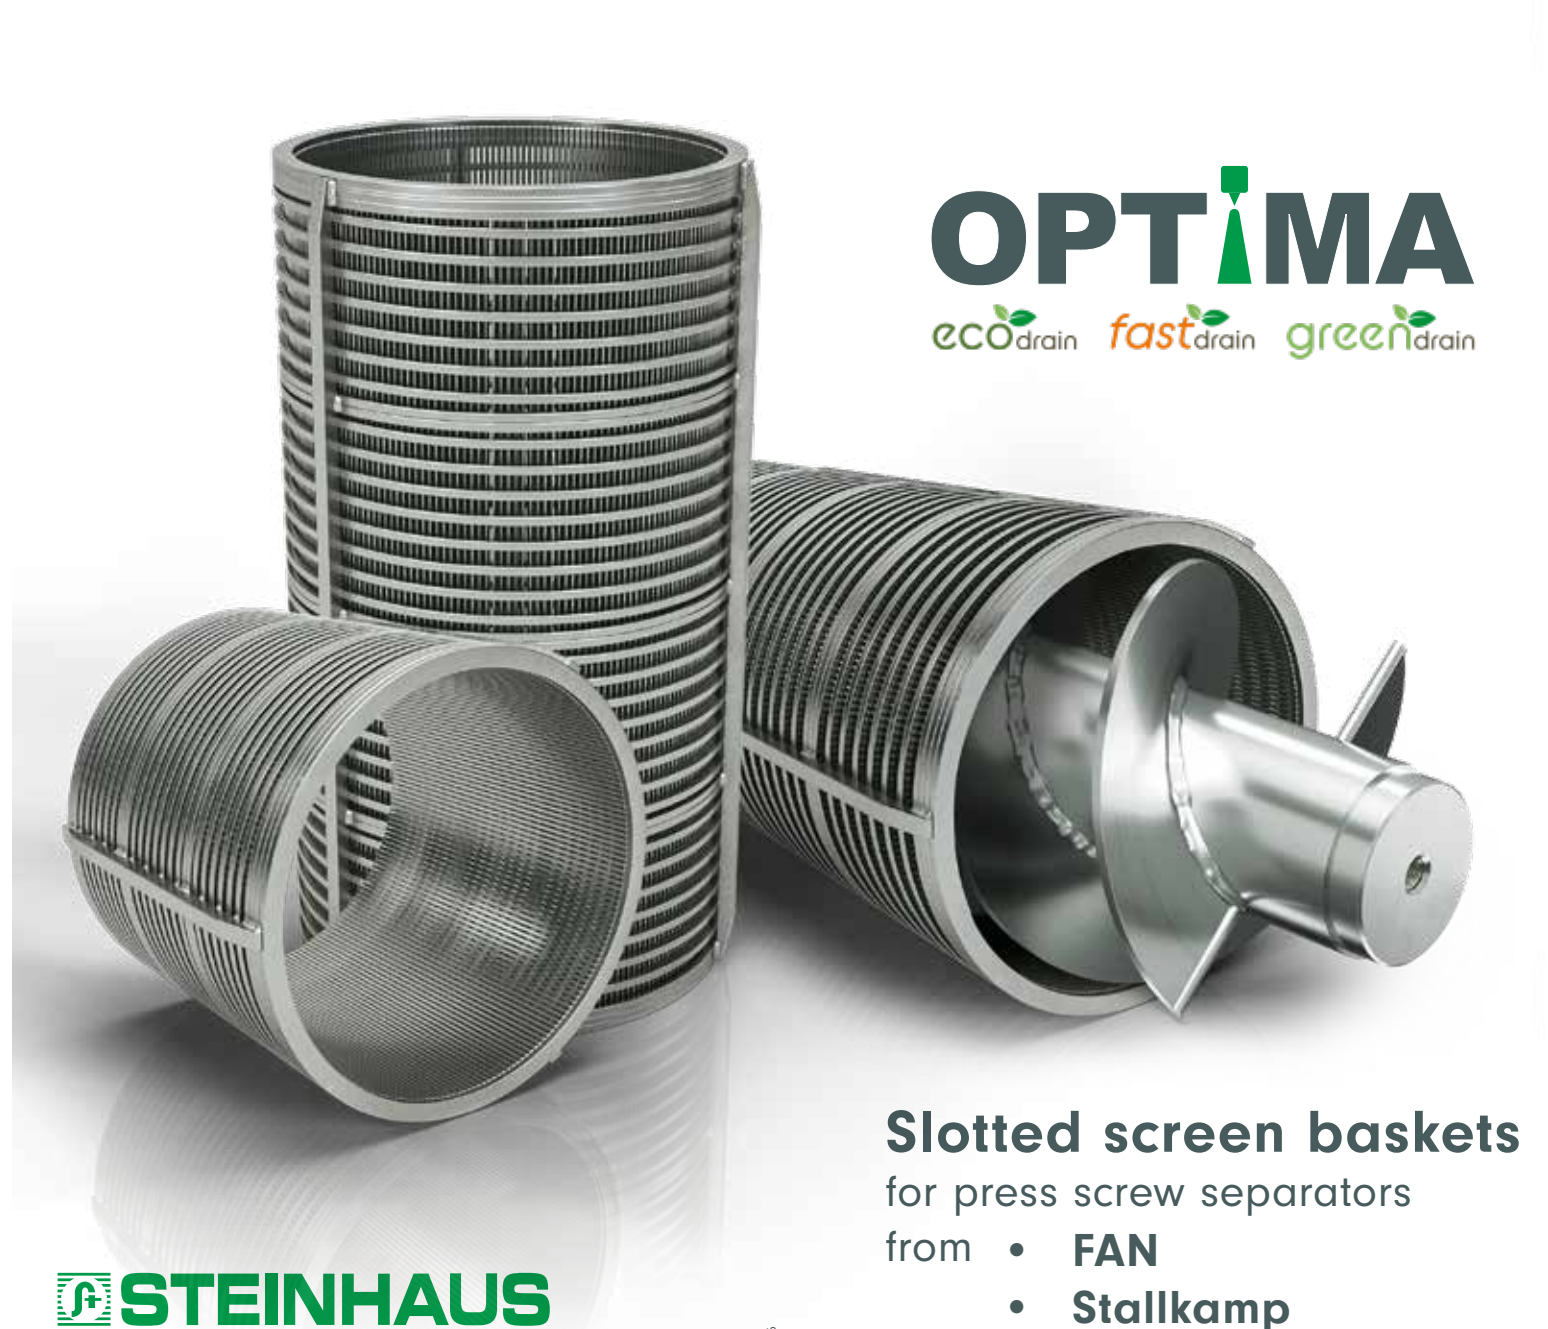

We produce slotted screen baskets for all common separator types at our production site in Germany in the best industrial quality.

They are robust and durable thanks to the use of high-quality stainless steel.

Our screen baskets consist of triangular, sharp-edged profile wires that are seamlessly enclosed by a spiral. These screen baskets are manufactured in the axial gap version in optimized OEM quality.

In this version, the gap-forming profiles run parallel to the longitudinal axis of the separator, ideal for your application.

Slotted screen baskets for press screw separators

from • **FAN**
• **Stallkamp**
• **EYS**

and other top manufacturers!

 **STEINHAUS**

The three screen basket - variants

STEINHAUS screen baskets are available in the ecoDrain, fastDrain and greenDrain versions. Separation ensures efficient separation of the liquid and solid components of slurry or biomass. Our rotation-optimized screen baskets separate dry from wet safely, quickly and reliably.

ecoDrain is the name of our high-quality standard screen cylinder.

The fastDrain screen cylinder is ideal for demanding applications with a high dry matter content.

Are you looking for economical bedding? Stable and stackable? Then we recommend our greenDrain line for the highest possible TS content.

Product features

- Cylindrical OPTIMA screen baskets for press screw separators
- single or multi-part
- in all technically possible sizes and designs

Custom manufacturing

Thanks to our computer-aided production, we are also able to tailor the right screen cylinder for special applications or even for extreme loads, depending on customer requirements.

STEINHAUS Stock program		Slot width [mm]			
		0,50	0,75	1,00	1,20
Wedge Wire Screen cylinder compatible with FAN-Separatoren with length 260 mm / Ø 260 mm
